

Cabs

4x2 and 6x2 Tractors

Design and Construction

The Axor cab is purpose designed for distribution and logistics applications. It offers an extremely comfortable working environment normally only associated with larger long distance trucks. The controls are simple to operate and logically positioned.

All cabs are constructed of steel and precision welded by robots. Critical areas are galvanised and box sections are filled with wax. This gives excellent protection against corrosion and offers high standards of occupant safety. (Complies with ECE R29).

Cabs tilt to 67° to enable service access.

Comfort

Axor cabs all feature extensive heat and sound insulation, the cab is suspended on front and rear spring struts with dampers making life on board as relaxing as possible.

The high roof sleeper cab features a single piece lower bed with an internally sprung mattress measuring 2040 x 645mm. The upper bed is similarly constructed and offers even more generous dimensions - 2000 x 700mm.

The driver's air suspension seat is fully adjustable and includes integral 3 point inertia reel seat belt and adjustable head restraint. The fixed passenger seat is also fully adjustable with 3 point seat belt and adjustable head restraint.

All of the materials used in the Axor cab have been specially selected to deliver a high quality look and feel throughout the vehicle's life.

Interior Lighting

Large lamps provide interior lighting with manual and door switches. A map reading light and a reading light for the bunk area are also provided along with night time green lamps.

Storage

Axor provides generous storage facilities for all manner of drivers kit, offering practical and accessible places for large and small items alike.

For smaller items; both doors feature deep pockets with bottle holders, above the windscreen are shelves for documents or maps, the facia features multiple recesses for handy items and integrated cup holders and on top of the dash a large flat area that has many uses.

The high roof sleeper cab includes two large compartments under the bed and a large locker and open compartment above the windscreen.

Access

Getting in and out of the Axor X is a simple affair. The three non-slip steps are arranged in staircase fashion, the grab handles are positioned naturally and the doors open to a full 85°.

Instruments

The wrap-around dashboard offers each control to the driver exactly where he expects to find it. A quick glance at the anti-glare driver display gives all the information needed for safe driving. Detailed driver information can be obtained by scrolling through the different pages using the multi-directional button on the dash. A two man digital tachograph (Siemens VDO as standard) is located above the windscreen with a conventional speedometer and rev counter on the dash. Axor X cabs are finished with brushed steel effect trim and soft feel materials giving an air of quality.

Protection & Finish

Axor cabs are painted Arctic White as standard, they can be ordered in a range of solid or metallic colours.

Chassis and components are finished in Nova Grey whilst the wheels are painted silver.

Service Access

Access through front service panel for:

- Engine oil top-up
- Coolant water top-up
